1

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

5 minutes

PROBLEM

Early detection of forest fire

Key rules of brainstorming

To run an smooth and productive session

- Stay in topic.
- Encourage wild ideas.
- Defer judgment.
- Listen to others.
- Go for volume.
- If possible, be visual.

Narendiran B S

Have a fire extinguishing team, water reservoir, and a shovel ready to put the infammation out

Infrared and thermal cameras can see through smoke to monitor ground teams and let them know when conditions change.

Gokulasankar M

False free alert Low altitude UAV returns to base.Medium altitude UAV maintains observation.

UAVs can provide georeferenced aerial images, heat maps, and temperature scales of fre zones.

Thamarai kannan M

Environmental pollution and loss of bio diversity will be the major problem in the severe forest fire

wind flow will be the major reason of the increase in fire all around the forest.so necessary precaution should be made.

Jai sakthi G

large amount of carbon di oxide ,sulphur di oxide,nitrogen di oxide will be released in the atmosphere

Forest habitants should be captured and shifted to the new place for living

Afforestion

wildlife sanctuary

food chain

tribal welfare

fire extinguishing team

new technolgy

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

20 minutes

Feasibility

Regardless of their importance, which tasks are more feasible than others? (Cost, time, effort, complexity, etc.)
